

### Bow String Truss Bridges

The Bow string truss is an elegant and much desired solution for many of our clients. It provides an arch formation and mimics' many of the attributes of the tied arch, but allows simpler design and construction detailing, resulting in more cost effective solutions for the Client.

CTS have extensive experience in the design, manufacture and installation of Bow String Truss footbridges. This type of bridge is very popular and has been installed by CTS Bridges all over the UK. Lighting and decorative features can be incorporated within the design.

CTS provide a complete design, build and installation service for this type of bridge.
